

# Bennett E85 Fuel Dispensers

Bennett has years of experience manufacturing E85 dispensers. Even before we began manufacturing our own E85 dispensers, foreign pump companies have used our E85 compatible meters and pumping units. We've been serving Sweden, Brazil, the U.S., and other markets for years with products to dispense high concentration ethanol.

Bennett's E85 Compatibility Option is available for all 3k series conventional flow rate commercial and retail dispensers.

These units are made to the same standards as our Gasoline/Diesel motor fuel dispensers except:

- All wetted parts that are incompatible with E85 are treated with a proprietary process to make them impervious to the chemical effects of E85.
- Special seals and gaskets are used for compatibility with E85.
- The E85 Compatibility Option is available for all conventional flow rate commercial and retail 3k series singles and duals. These units are available with all other options for the 3k series. Low hose, high hose, electronic or mechanical chassis is available.

**WARNING:** For safety reasons all dual hose pumps and dispensers will have the E85 Compatibility Option for both hoses regardless of product to be dispensed.

**WARNING:** Bennett standard motor fuel dispensers are compatible with ethanol or methanol concentrations in gasoline of up to 15% by volume. Do NOT use standard Bennett motor fuel dispensers for E85 or any concentrations of alcohol above 15%.

**WARNING:** Hanging hardware such as nozzles, hoses, etc. must be compatible with E85.

- Mechanical or Electronic.
- Retail or Commercial Displays.
- Suction or Remote.
- High Hose or Low Hose Style
- (Industry's only high hose commercial dispenser - electronic or mechanical).
- Front\* or Side Mount Nozzles.
- Singles or Duals.
- Color & Graphic Options.
- Standard Electronic Calibration.\*
- Standard Battery Backup for Last Sale Recall During Power Outages (Required for Resale of Fuel).\*
- Optional Pulse Output to Fleet Management Systems (Dual Channel Allows Pulses to FMS and Inventory Reconciliation Programs).\*
- Current Loop Interface to VeriFone Ruby Super System (Requires Model 515 Pump Controller).\*
- Optional Debit/Credit Card Payment System in Retail Versions (Single Display per Side Only).\*
- Magnet Activated Electronic Totals.\*

\*Feature of electronic models only.

See Individual Product Cut Sheets for Complete List of Standard and Optional Features.
