Bennett Pump Company to introduce BlueFueller line of DEF dispensers at NATSO/PEI Conference in Nashville, June 4th and June 5th. Bennett Pump, Spring Lake Michigan, will introduce the industry's most complete line of DEF dispensers and suction pumps at the upcoming NATSO/PEI conference. Models include the 100, 200, 300 and 400 Series. These models are targeted for both commercial fleet applications and retail locations and truck stops. The 100 and 200 Series, available in both suction and remote versions, are designed for above ground tanks and IBC totes. The 300 and 400 Series are for traditional underground storage systems in remote configurations only.

The BlueFueller has a high-quality stainless steel meter and is engineered for high-reliability and low cost of ownership. Options include heating systems, pulser outputs for card lock system interfaces and Bennett retail electronics for point-of-sale interfaces.

"We have visited with a large number of fleet owners and truck stop operators and believe we have targeted exactly what they are looking for with our BlueFueller line" says Alan Levine, Vice President of Business Development for Bennett Pump. "It is a tough environment and DEF (Urea) has some unique characteristics. We have a strong engineering team who has developed a world-class product at a price point we believe the industry is demanding".

About Bennett Pump

Bennett Pump, a division of the Hines Corporation, is based in Spring Lake, Michigan. In business since 1919, Bennett Pump is a leading worldwide manufacturer of commercial and retail dispensers in addition to supplying the global dispenser industry with OEM products including meters and pumping units. Bennett's Pacific retail dispenser is the latest flagship product. Bennett Pump also owns a manufacturing plant in Shanghai China. More information can be found at www.bennettpump.com.
